

The **Minafin group** of fine chemical companies develops and produces active pharmaceutical ingredients (APIs) as well as advanced intermediates for the pharmaceutical, cosmetic and green chemistry industries. Structured by brand, the group has been supporting its customers for many years in the scale-up and development of their products, with an emphasis on safety requirements and high quality standards. Thanks to its network of manufacturing sites in Europe and the US, the group has realized sales of EUR 156 M in 2016 with over 750 employees.

Minakem High Potent with its site at Louvain-La-Neuve, Belgium is developing and producing highly potent APIs and controlled substances according to cGMP and is currently looking for a

Quality Engineer - Validation in a GMP environment

FUNCTION DESCRIPTION

After your induction period, you become responsible for the compliance of validation activities and perform the following tasks:

- You ensure site procedures for qualification and validation remain aligned with current authorities requirements, and staff is adequately trained on these procedures.
- You are responsible for the coordination of validation and qualification activities. You perform the qualification of IT systems and ensure these are adequately documented.
- You ensure the compliance of qualification and validation documentation.
- You take part to the Quality audits performed by Health Authorities and Customers and to the definition and implementation of corrective actions.
- You act as contact person for the different internal departments such as IT, Quality Control team, Production, ...
- You participate to the maintenance of the Quality system (management of procedures, ...).
- In this function, you report to the QA Manager.

PROFILE

- You hold an university degree (Master or Ph.D.) in pharmacy, engineering, IT, chemistry, biochemistry, and at least 2–5 years of relevant experience in the field of qualification or validation activities in a GMP environment
- Excellent knowledge of French and English (oral and written) is a must.
- You are IT minded and you have good knowledge of statistical process control tools. You are creative and curious about everything that has to do with IT.
- You are able to tackle complex problems with logical mind and you deliver insightful, practical solutions in a continuous improvement mindset.
- On the one hand, you like to communicate in a constructive way to induce quality mindset. On the other, you have affinities for administrative work. You are a good writer and your reports are comprehensive and precise.
- You can work in a team as well as autonomously
